Just **CLICK** to get started

The CLICK™ family is an easy-to-use controller that is cost-effective even in applications that would require just a few relays, and more flexible to boot.

With a starting price of \$69.00 for a discrete controller offering eight built-in digital inputs and six built-in digital outputs, this stand alone micro brick PLC is by far the most practical choice for the money.

Just **CLICK** to get **FREE** Software

The CLICK PLC programming software is available as a **FREE** download from our Web site.

Unlike many "FREE" programming packages you may be familiar with, this software is packed with features that simplify your learning curve and shorten your programming time.

**FREE
SOFTWARE**

Just **CLICK** for quality

Koyo Electronics, our parent company, is part of the multibillion dollar JTEKT group of companies that primarily provides components to automotive manufacturers such as Toyota.

With their extensive engineering and manufacturing background, we expected nothing but the best, and Koyo delivered! While development focused on building a reliable product, they were also able to deliver a product that offers the best combination of price, ease of use, and features.

The price is almost free while the quality and ease of use is almost priceless.

**QUALITY
CONSTRUCTION**

What is it?

CLICK micro-brick PLCs, **starting at \$69.00**, offer stackable I/O modules and free programming software for a low-cost and easy-to-use high-quality machine controller. It is designed for first-time PLC customers as well as experienced users.

What's it got?

- Eleven stand-alone DIN-rail mount DC-powered CPU combinations, including:
 - 8 DC In / 6 DC Out (sinking)
 - 8 DC In / 6 DC Out (sourcing)
 - 8 DC In / 6 Relay Out
 - 8 AC In / 6 Relay Out
 - 4 DC In / 4 DC Out (sinking), 2 analog in, 2 analog out (current / voltage selectable)
 - 4 DC In / 4 DC Out (sourcing), 2 analog in, 2 analog out (current / voltage selectable)
 - 4 DC In / 4 Relay Out, 2 analog in, 2 analog out (current / voltage selectable)
- Built-in communication ports (two in basic CPUs, three in standard and analog CPUs)
- Real-time clock and battery back-up in standard and analog CPUs
- Removable terminal blocks
- 24 stackable, I/O option modules
- Program AND documentation stored in CPU
- FREE, high-feature programming software

What can it do?

Replace even just a few relays cost-effectively and gain a world of flexibility. Interface to any Modbus RTU enabled device with the RS-232 communication ports (6P6C/RJ12 connectors) and/or RS-485 port (on standard and analog CPUs).

Expandable to 142 I/O

At \$69.00, you get a ton of application control for your automation buck. The CLICK™ PLC offers you many options for your discrete and simple analog control applications.

The basic and standard CPUs offer, built in, eight digital inputs and six digital outputs; the analog CPUs include four digital inputs, four digital outputs, two analog inputs and two analog outputs. These DC-powered PLCs are a mighty controller as a stand alone unit, or expand your I/O with up to eight of the 24 available option modules for up to 142 total I/O. The I/O lineup offers you 24 VAC input, both sinking and sourcing 24 VDC input and output options, 120 VAC input and output modules, and relay modules up to seven amps for your discrete applications; analog modules support 4-20 mA or 0-10 VDC input and output options for simple process measurement and control.

With multiple options for main input power, you decide what best fits into your control panel. Use your existing 24 VDC power supply (if applicable), select one of our low-cost CLICK PLC power supplies (based on your system power budget requirements) or select one of AutomationDirect's rugged Rhino power supplies.

Two RS-232 communications ports supporting industry standard Modbus RTU protocol are included on all units. These ports are suitable for connection to a PC for programming, networking PLCs, C-more/C-more Micro operator interface panels, variable frequency drives, servos, steppers, and other Modbus RTU enabled devices. The standard and analog CPUs also include one RS-485 port.

Need inexpensive data logging? **DataLynx** (see *Software section*) can collect data from remote locations or relay data from multiple locations back to a single location to be stored. Interface to CLICK via Modbus protocol over a serial or modem connection.

Simple to learn ... easy to use

The CLICK PLC programming software is based on the C-more and C-more Micro programming environments. We leveraged these two great programming packages developed by Koyo to created CLICK's intuitive programming tool, and then made it a FREE download from our Web site. So you now have free software for your practically free PLC! But don't let the \$0 price tag fool you - you'll find this software loaded with options that you would normally expect to pay extra for!

Add up to eight Analog I/O modules and interface with over 50 analog channels!

Prices start at \$22.25 per channel (4-channel module). Thermocouple (or RTD) channels are \$37.25 each. Can your current PLC match that?

Add analog I/O modules

If the CLICK Analog CPUs don't provide enough analog channels, now you can add analog channels with our 4-channel input and/or 4-channel output modules, OR check out the combo modules with 4-channels IN and 2 channels OUT. Each style is available in either current or voltage flavors.

Connect to all your analog devices: pressure and level transmitters, current transducers, proportional valves, AC drives, panel meters, etc.

Simple to learn ...

The CLICK PLC programming tool was designed with the user in mind. We have simplified the programming process to make it easier to learn, faster to program, and capable of completing most of your discrete application needs with only 21 instructions!

This combination of RLL (Relay Ladder Logic) and Function block programming offers you a comprehensive programming environment with easy navigation and a familiar Windows look and feel.

... Easy to use

We listened to our customers and tried to address what they felt were the inhibitors to a simplistic programming environment. This includes more intuitive instructions that are not only easier to use but also offer more functionality at the same time. We worked to create one of the best help files of any software in the industry. We offer you enough options to easily address the majority of your needs during all phases of programming (learning, coding, commissioning, troubleshooting), while keeping it structured enough to make the basic operations obvious.

Action-packed

The CLICK PLC Programming tool allows each individual to set up their programming environment to suit their needs. Beginners may choose to program almost exclusively via the mouse by clicking on icons, instructions, drop-down menus, and selecting PLC addresses from the "Address Picker". As programmers become more experienced, the time-saving keyboard shortcuts can greatly enhance productivity, and speed development/debug times. Many of the instruction entry shortcuts are even the same as those used in our *DirectLOGIC* PLC software.

Either way, you can select the option that suits your style of programming.

Simply download your free software at:

www.clickplcs.com

Simplified instruction set reduces your programming time

Instruction List

The CLICK PLC programming software offers 21 extremely powerful instructions! This instruction set offers the same flexible control you might expect from over 150 instructions in a traditional controller. Simply drag and drop these instructions onto the ladder view (the center section of the screen), and a helpful dialog box will guide you through each instruction's configuration.

What's included?

The 21 CLICK PLC instructions include everything you would typically expect:

- Contacts*
- Coils
- Compare
- Set/Reset
- Timer
- Counter
- Math**
- For/Next

Then there are some advanced instructions you might not expect:

- DRUM
- Send/Receive
- Copy
- Shift Register
- Call/Return(Subroutine)
- Search

* Contacts include Normally Open, Normally Closed, Edge-triggered and Compare

** Math includes Decimal, Floating Point and HEX math. Supports free-form formula entry.

Note: The RETURN instruction is not included in this list because it is used in the Subroutine and Interrupt programs only.

CLICK offers intuitive navigation

Navigation Pane

The CLICK PLC programming software offers an easy-to-view Navigation Pane which places program controls at your fingertips. Quickly toggle between your main program, Subroutines, Interrupts, Data Views, Rung Comments Editor and more.

At your fingertips

The Navigation Pane puts many practical and frequently used functions within one CLICK of your mouse during configuration, commissioning and troubleshooting. Quickly move between your Main Ladder Program and Subroutines and Interrupt routines within your project. Access frequently used system functions such as System Setup, Password utility, Comm Port Configuration, PLC Connection, Data and Project Transfer, Firmware Update and many more. Many of these functions are also available via drop-down menus. It's your choice!

Use the color-coded Window Control Toolbar to quickly and easily hide the navigation (and/or instruction) pane to maximize your ladder programming work space.

Timer Instruction

The Timer Instructions are typically some of the more basic instructions in a control environment, so how could we possibly make them any better? We listened to you ...

Instead of having multiple timer instructions with different functions and features, we created a single timer instruction with simple selections to allow programming of the precise timer function needed for your application. Select from On-delay or Off-delay timing and retentive or non-retentive current values.

Just CLICK ... It's that easy.

Math Instruction

Performing mathematical calculations in a PLC typically requires a complicated set of instructions and programming gymnastics. From mixing process variable data with constants in multiple formats, to calculating complex logarithmic formulas, math computations in ladder logic can be complex, so how could we possibly make it any better? We listened to you...

Instead of having a full set of various math instructions you string together to perform complex mathematical equations, we created a single instruction that allows you to enter formulas directly or select from the familiar calculator style layout to create your formula.

Math (Decimal)

Description The **Math** instruction solves a user-defined formula during the execution of the **Ladder Program**. The formula is developed on the **Math** dialog using the on-screen keypad, the computer keyboard, and **Address Picker**. Two sets of mathematical operators are available. One set is appropriate for use with decimal values, and the other is for use with hexadecimal values. Also see **Math (Hex)**. Parenthetical expressions can be nested up to eight levels deep. If the **Floating Point Data Type** is used in any operation, then all operations will be based on **Floating Point** math. The solution will be stored in the data format selected for the **Result**.

CLICK has practical accessories

The ZIPLink wiring system eliminates the normally tedious process of wiring PLC I/O to terminal blocks. Simply plug one end of a ZIPLink pre-wired terminal block cable into your I/O module and the other end into a ZIPLink connector module. It's that easy. ZIPLinks use half the space, at a fraction of the total cost of terminal blocks.

Three ZIPLink cable lengths are available: 0.5m (1.6ft.), 1.0m (3.3ft.), and 2.0m (6.6ft.). See Wiring Solutions section of catalog.

Other accessories include a hardware manual, programming cables, spare terminal blocks, and replacement batteries for analog CPU modules

CLICK PLC Overview

PLC System

The CLICK PLC family of components is designed to offer practical PLC features in a compact and expandable design and, at the same time, offer the best ease-of-use.

System Configuration

A powered CLICK CPU module by itself can be used as a complete PLC system with 8 input points and 6 output points built-in (Basic and Standard CPUs) or with 4 output points, 2 analog input points and 2 analog output points (Analog CPUs). The system can also be expanded with the addition of up to 8 I/O modules. A variety of discrete and analog I/O modules are available for flexible and optimal system configuration.

Decimal Memory Addressing

The I/O numbering system and memory addressing are decimal to make it easier to count the number of I/O points and data registers.

Communications

All CPUs have two built-in RS-232 communications ports. Standard and Analog CPUs also have one built-in RS-485 communications port. One RS-232 port supports the Modbus RTU protocol only and can be used as the programming port. The other ports support either Modbus RTU or ASCII protocol. Both RS-232 ports supply 5 VDC, so you can connect a monochrome C-more Micro HMI panel without an additional power supply.

Analog I/O

Analog CPU modules have built-in analog I/O (2-channel analog inputs and 2-channel analog outputs). Analog input, output and combo I/O modules are also available.

Calendar / Clock & Battery Backup

Standard and Analog CPU modules include the real time clock and battery backup for the internal SRAM. Battery allows data to be stored for 5 years (Battery sold separately).

FREE Programming Software

The CLICK programming software can be downloaded free from our Web site and provides an intuitive programming tool that will get you up and running quickly.

Easy-to-Use Instructions

The CLICK PLC supports a very simple but practical instruction set. The easy-to-use instructions can cover most applications that are suitable for this class of PLC (the CLICK PLC does not support DirectLOGIC instructions).

8,000 Steps Program Memory

The CLICK CPU module can store up to 8,000 steps of ladder program in its flash EEPROM memory.

2 Year Warranty

All CLICK PLC modules are covered under a 2 year warranty.

Use a CLICK PLC as a stand-alone controller...

or, expand the system by installing up to eight additional I/O modules.

CLICK PLC Overview

What you'll need

Of course, what you'll need for your system depends on your particular application, but this overview shows you what you'll need for a simple system.

1. Select your CLICK CPU module.

2. If you need additional I/O, select from thirteen types of I/O modules.

3. Select a 24 VDC power supply.

or

4. Download the FREE CLICK programming software.

5. Select your PC-to-PLC programming cable.

If your PC has a USB port, use cable EA-MG-PGM-CBL to connect to the CPU module port. If your PC has a 9-pin serial communications port, use programming cable D2-DSCBL.

EA-MG-PGM-CBL

or

CLICK Programming Software

FREE Software!

CLICK programming software can be downloaded at no charge.

The CLICK programming software is designed to be a user-friendly application, and the tools, layout, and software interaction provide ease-of-use and quick learning.

The simple operation of this software allows users to quickly develop a ladder logic program. The online help file provides information that will help you get acquainted with the software quickly.

PC Requirements

CLICK PLC Windows-based programming software works with Windows® 2000 Service Pack 4, XP Home or Professional, Vista (32 bit), and Windows 7 and Windows 8 (32 bit and 64 bit for both). These are the minimum system requirements:

- Personal Computer with a 333 MHz (2000 SP4/XP), 800 MHz (Vista), 1 GHz (Windows 7 and Windows 8) or higher processor (CPU) clock speed recommended; Intel Pentium/Celeron family or AMD K6/Athlon/Duron family, or compatible processor recommended
- SVGA 1024x768 pixels resolution. (1280x1024 pixels resolution recommended)
- 150MB free hard-disk space
- Memory (free RAM): 128MB (512MB recommended) for 2000 SP4/XP; 512 MB (1 GB recommended) for Vista, 1 GB (2 GB for 64 bit) for Windows 7 and Windows 8
- CD-ROM or DVD drive (only if installing software from a CD-ROM)
- 9-pin serial port or USB port for project transfer to PLC (USB port communications also requires USB-to-serial converter. Note: USB-to-serial converter does not support XP Mode of Windows 7)

The CLICK Programming Software can be downloaded free at the **AutomationDirect** Web site:

www.support.automationdirect.com/products/clickplcs.html

C0-PGMSW

The programming software is also available for purchase on a CD-ROM.

NOTE: CLICK PLCs cannot be programmed using *DirectSOFT* programming software, which is used to program our *DirectLOGIC* PLCs; you must use the **CLICK** programming software.

Main window

The Main Window is displayed when the program opens. It is divided into Menus, Toolbars, and Windows that work together to make project development as simple as possible.

CLICK Programming Software

Instructions

The easy-to-use instructions are described in the CLICK programming software online help file.

Powerful Features!

CLICK programming software has amazingly powerful features for a free software product, such as

- Address picker
- Separate subroutine programs
- Separate interrupt programs
- Color rung comment feature
- Project loader
- Documentation is stored within the PLC memory

Address Picker

The Address Picker is a powerful multi-function memory table which can be used to assign nicknames, create address comments, and establish initial values for specific memory locations. It can assign specific memory locations to be retentive during power outages. The Address Picker also has powerful tools for sorting the memory table and making it easier to use.

Subroutine Programs

Subroutine programs can be created and named to isolate a body of program code that is run selectively. You can run up to 986 subroutine programs.

Interrupt Programs

Interrupt programs are created and named. The Basic and Standard CPU modules support up to 12 interrupt programs. The Analog CPU modules support up to 8 interrupt programs.

CLICK Programming Software

Color Rung Comment

Easily create and edit rung comments with colors and three text styles. Comments are stored in the PLC memory for future reference.

Project Loader

The CLICK programming software can export the CLICK project in an encrypted format. The exported file can be sent to the end user. Then the end user can download the file into the CLICK PLC with the tool called Project Loader.

NOTE: PROJECT LOADER IS A SEPARATE PROGRAM FROM THE CLICK PROGRAMMING SOFTWARE, BUT IT IS INSTALLED ON THE PC WHEN THE CLICK PROGRAMMING SOFTWARE IS INSTALLED.

Product Dimensions and Installation

It is important to understand the installation requirements for your CLICK system. Your knowledge of these requirements will help ensure that your system operates within its environmental and electrical limits.

Plan for Safety

This catalog should never be used as a replacement for the user manual.

You can purchase, download free, or view online the user manuals for these products. Manual C0-USER-M is the user manual for the CLICK PLC. This user manual contains important safety information that must be followed. The system installation should comply with all appropriate electrical codes and standards.

NOTE: THERE IS A MINIMUM CLEARANCE REQUIREMENT OF 2 INCHES (51 MM) BETWEEN THE CLICK PLC AND THE PANEL DOOR OR ANY DEVICES MOUNTED IN THE PANEL DOOR. THE SAME CLEARANCE IS REQUIRED BETWEEN THE PLC AND ANY SIDE OF THE ENCLOSURE. A MINIMUM CLEARANCE OF 3 INCHES (76 MM) IS REQUIRED BETWEEN THE PLC AND A WIREWAY OR ANY HEAT PRODUCING DEVICE.

Mounting Orientation

CLICK PLCs must be mounted properly to ensure ample airflow for cooling purposes. It is important to follow the unit orientation requirements and to verify that the PLC's dimensions are compatible with your application. Notice particularly the grounding requirements and the recommended cabinet clearances.

Product Dimensions and Installation

Connecting the Modules Together

CLICK CPUs, I/O modules and power supplies connect together using the extension ports that are located on the side panels of the modules (no PLC back-plane/base required).

1. Remove extension port covers and slide the latch tabs forward.
2. Align the module pins and connection plug, and press the I/O module onto the right side of the CPU.
3. Slide the latch tabs backward to lock the modules together.

Mounting

The CLICK PLC system, which includes the CLICK power supplies, CPU modules, and I/O modules, can be mounted in one of two ways.

1. DIN rail mounted
2. Surface mounted using the built-in upper and lower mounting tabs.

Unit Dimensions

These diagrams show the outside dimensions of the CLICK power supply, CPU, and I/O modules. The CLICK PLC system is designed to be mounted on standard 35mm DIN rail, or it can be surface mounted.

Allow proper spacing from other components within an enclosure.

Maximum system:

Power Supply + CPU + 8 I/O modules.

Built-in Communications Ports

All CPUs have two built-in RS-232 communications ports. Standard and Analog CPUs also have one built-in RS-485 communications port. One RS-232 port supports the Modbus RTU protocol only and can be used as the programming port. The other ports support either Modbus RTU or ASCII protocol. Both RS-232 ports supply 5 VDC, so you can connect a monochrome C-more Micro HMI panel without an additional power supply.

LED Status Indicators

There are LED indicators located to the left of each communication port to indicate when the port is transmitting or receiving.

Basic CPUs

Port 1 & 2 LED Status Indicators

TX1 and TX2 (Green)	
On	The Comm Port is sending data.
Off	The Comm Port is not sending data.

RX1 and RX2 (Green)	
On	The Comm Port is receiving data.
Off	The Comm Port is not receiving data.

Standard and Analog CPUs

Port 1, 2, & 3 LED Status Indicators

Typical Serial Communication Applications

The diagrams on these two pages illustrate the typical uses for the CLICK CPU's communication ports.

Port 1 (RS-232) – Modbus RTU Slave Mode Only

C-more Micro-Graphic panels (monochrome models only) can get 5 VDC power from Com port 1 or 2.

Example

NOTE: CLICK's PORT 1 AND PORT 2 CAN PROVIDE 5 VDC TO POWER THE PANEL, BUT NOT AT THE SAME TIME. IF A C-MORE MICRO-GRAPHIC PANEL IS CONNECTED TO BOTH PORTS, THEN AT LEAST ONE OF THE PANELS MUST BE POWERED BY A C-MORE MICRO DC POWER ADAPTER, EA-MG-P1 OR EA-MG-SPI, OR ANOTHER 24 VDC POWER SOURCE. COLOR C-MORE MICRO-GRAPHIC PANELS MUST ALSO BE POWERED FROM A SEPARATE 24 VDC SOURCE.

Do not use the following DirectLOGIC devices with CLICK's Port 1 or 2:

WARNING: The following DirectLOGIC PLC devices cannot be used with a CLICK CPU's Port 1 or Port 2:
Handheld Programmer for DL05, DL06, DL105, DL205 & D3-350 CPUs, p/n D2-HPP
Handheld Programmer for DL405 CPUs, p/n D4-HPP-1

Networking the CLICK PLC

Port 2 (RS-232) – Modbus RTU or ASCII

Port 3 (RS-485; Standard and Analog CPUs Only) – Modbus RTU or ASCII

All CPUs have RS-232 port 2, but only Standard and Analog CPUs have RS-485 port 3.

Ports 2 and 3 allow networking to similar devices.

Power Supplies

Power Supplies

The CLICK PLC family offers two 24 VDC power supplies. They are identical except for the output current.

It is not mandatory to use one of these CLICK power supplies for the CLICK PLC system. You can use any other 24 VDC power supply that Automationdirect.com offers, including the PSP24-DC12-1 12 VDC to 24 VDC converter shown below.

C0-00AC Power Supply

Limited auxiliary AC power supply allows you to power the 24 VDC CLICK C0 series CPUs with 100-240 VAC supply power. The 0.5A DC power supply is capable of controlling the CPU plus a limited configuration based on the power budget of each I/O module. The C0-00AC is a low-cost solution for applications requiring only minimal I/O and power consumption. This power supply will not support a fully-populated CLICK PLC system with all possible I/O module combinations.

C0-01AC Power Supply

Expanded auxiliary AC power supply allows you to power the 24 VDC CLICK C0 series CPUs with 100-240 VAC supply power. The 1.3A DC power supply is capable of supporting a fully-populated CLICK PLC system with all possible I/O module combinations, with no concerns for exceeding the power budget.

PSP24-DC12-1 DC-DC Converter

With this DC-DC converter you can operate the CLICK PLC with 12 VDC input power.

24 VDC power is supplied to the CPU module through wiring connected from the power supply output to the 4-pin 24 VDC input connector located on the bottom of the CPU module.

Power Budgeting

Power Budgeting

There are two areas to be considered when determining the power required to operate a CLICK PLC system. The first area is the power required by the CLICK CPU, along with the internal logic side power that the CPU provides to its own I/O and any connected I/O modules that are powered through the CPU's expansion port; plus any device, such as a C-more Micro-Graphic panel, that is powered through one of the CPU's communication ports.

The second area is the power required by all externally connected I/O devices. This should be viewed as the field side power required. The field side power is dependent on the voltage used for a particular input or output device as it relates to the wired I/O point, and the calculated load rating of the connected device.

It is strongly recommended that the power source for the logic side be separate from the power source for the field side to help eliminate possible electrical noise.

Power budgeting requires the calculation of the total current that the 24 VDC power source needs to provide to CLICK's logic side, and also a separate calculation of the total current required for all devices operating from the field side of the PLC system.

See the Power Budgeting Example shown to the right. The table shows current requirements for a CLICK CPU, two I/O modules, and a C-more Micro. Use the total amperage values to select a proper sized power supply.

Power Budgeting Using the CLICK Programming Software

The CLICK Programming software can also be used for power budgeting. Based on the amperage rating of the power supply selected in the first column, your power budget is calculated by subtracting each consecutive module's power consumption from the total available power budget. If you exceed the maximum allowable power consumption the power budget row is highlighted in red.

Choosing the I/O Type

Three types of CPU modules are available:

- Basic CPUs with discrete-only inputs and outputs.
- Standard CPUs with discrete-only inputs and outputs, plus an extra communications port and battery backup.
- Analog CPUs with both discrete and analog inputs and outputs, plus an extra communications port and battery backup.

All CLICK CPU modules offer the same performance, use the same instruction set, and support all optional I/O modules.

Basic and Standard CPU Modules

The Basic and Standard CLICK CPU modules are available with different combinations of built-in I/O types (i.e. DC input/DC output, DC input/relay output, and AC input/relay output). With the 14 built-in I/O points (8 inputs/6 outputs), the CPU can be used as a ready-to-go PLC control system without any additional I/O modules. The CPU module just needs 24 VDC, but it can be expanded in the future if the need arises.

The tables list the part numbers showing the various I/O type combinations.

Standard CPU Modules Only

Standard CPU modules also have an RS-485 port for Modbus and ASCII communications, and the battery backup feature which will retain the data in SRAM for 5 years (battery sold separately; part no. D2-BAT-1).

Analog CPU Modules

The Analog CLICK CPU modules are available with different combinations of DC in, DC sinking, sourcing or relay out, and analog in and out.

They also have an RS-485 port for Modbus and ASCII communications, and the battery backup feature which will retain the data in SRAM for 5 years (battery sold separately; part no. D2-BAT-1).

The table lists the part numbers showing the various I/O type combinations.

I/O Modules

A variety of discrete, combo, and analog I/O modules are available for the CLICK PLC system. Up to eight I/O modules can be connected to a CLICK CPU module to expand the system I/O count and meet the needs of a specific application. Complete I/O module specifications and wiring diagrams can be found later in this section.

Wiring Solutions using the ZIPLink Wiring System

ZIPLinks eliminate the normally tedious process of wiring between devices by utilizing prewired cables and DIN rail mount connector modules. It's as simple as plugging in a cable connector at either end or terminating wires at only one end. Prewired cables keep installation clean and efficient, using half the space at a fraction of the cost of standard terminal blocks.

ZIPLinks are available in a variety of styles to suit your needs, including feedthrough connector module. **ZIPLinks** are available for all Basic and Standard CLICK CPU modules and most discrete and analog I/O modules. Pre-printed I/O-specific adhesive label strips for quick marking of **ZIPLink** modules are provided with **ZIPLink** cables.

Solution 1: CLICK CPU and I/O Modules to ZIPLink Connector Modules

When looking for quick and easy I/O-to-field termination, a **ZIPLink** connector module used in conjunction with a prewired **ZIPLink** cable, consisting of an I/O terminal block at one end and a multi-pin connector at the other end, is the best solution.

Using the PLC CPU and I/O Modules to **ZIPLink** Connector Modules selector tables located in this section,

1. Locate your CPU or I/O module.
2. Select a **ZIPLink** Module.
3. Select a corresponding **ZIPLink** Cable.

Solution 2: CLICK CPU and I/O Modules to 3rd Party Devices

When wanting to connect I/O to another device within close proximity of the I/O modules, no extra terminal blocks are necessary when using the **ZIPLink** Pigtail Cables. **ZIPLink** Pigtail Cables are prewired to an I/O terminal block with color-coded pigtail with soldered-tip wires on the other end.

Using the I/O Modules to 3rd Party Devices selector tables located in the **ZIPLink** section,

1. Locate your CPU or I/O module.
2. Select a **ZIPLink** Pigtail Cable that is compatible with your 3rd party device.

Solution 3: GS Series and DuraPulse Drives Communication Cables

Need to communicate via Modbus RTU to a drive or a network of drives?

ZIPLink cables are available in a wide range of configurations for connecting to PLCs and *SureServo*, *SureStep*, *Stellar Soft Starter* and AC drives. Add a **ZIPLink** communications module to quickly and easily set up a multi-device network.

Using the Drives Communication selector tables located in the **ZIPLink** section,

1. Locate your Drive and type of communications.
2. Select a **ZIPLink** cable and other associated hardware.

Solution 4: Serial Communications Cables

ZIPLink offers communications cables for use with CLICK CPUs that can also be used with other communications devices. Connections include a 6-pin RJ12 connector which can be used in conjunction with the RJ12 Feedthrough module.

Using the Serial Communications Cables selector table located in the **ZIPLink** section,

1. Locate your connector type
2. Select a cable.

RTD Linearization	Automatic
Excitation Current (All Ranges)	210 μA
Accuracy vs. Temperature	±10 ppm per °C maximum
RTD Input Maximum Inaccuracy	±3°C (excluding RTD error); ±5°C (ranges Cu10 and Cu25)
RTD Linearity Error (End to End)	±2°C maximum, ±0.5°C typical, monotonic with no missing codes
Resistance Input Maximum Zero Scale Error	±0.0015% of full scale range in ohms (negligible)
Resistance Input Maximum Full Scale Error	±0.02% of full scale range
Maximum Linearity Error	±0.015% of full scale range maximum at 25°C, monotonic with no missing codes
Resistance Maximum Input Inaccuracy	0.1% at 0 to 60°C (32° to 140° F), typical 0.04% at 25°C (77° F)
Warm Up Time	30 minutes for ±1°C repeatability
Sample Duration Time	240 ms
All Channel Update Rate	Single Channel Update Rate times the number of enabled channels on the module
Open Circuit Detection Time	Positive full-scale reading within 2 seconds
Conversion Method	Sigma - Delta

* While it is possible to use different resistive ranges, we recommend using the narrowest range that covers the resistance being measured. For example, if measuring approximately 100 ohms resistance, use the 0 to 195.31 ohms range. While the resolution is the same as the 0 to 390.62 ohms range, output RMS noise will be lower and stability will be improved.

C0-04RTD General Specifications

4-Channel Thermocouple Input Module

4-channel thermocouple input module, 16-bit resolution (+/-0.1 degrees Celsius or Fahrenheit), Supports: J, K, E, R, S, T, B, N, C type thermocouples; voltage ranges are also supported, removable terminal block included. (replacement ADC p/n CO-8TB).

Wiring Diagram

NOTE: When using this module you must also use CLICK programming software and CPU firmware version V1.40 or later.

NOTE: With grounded thermocouples, take precautions to prevent having a voltage potential between thermocouple tips. A voltage less than -1.3V or greater than +3.8V between tips will skew measurements.

NOTE: When this module is used in a CLICK PLC system, it takes up to 11 seconds for initialization after power-up (see the table right). During this time period, the RUN LED on the CPU module blinks to indicate the initialization process.

PC to Panel Programming Cable Assembly for C-more Micro-Graphic Panels and CLICK PLCs

6-ft. cable assembly to connect a personal computer to any C-more Micro-Graphic panel or CLICK PLC for setup and programming.

Note: This cable assembly uses the PC's USB port and converts the signals to serial transmissions. The USB port supplies 5 VDC to the Micro-Graphic panel for configuration operations.

Assembly includes standard USB A-type connector to B-type connector cable, custom converter, and a RS232C cable with RJ12 modular connector on each end.

D2-DSCBL

<--->

Programming Cable for CLICK and DirectLOGIC PLCs

12 ft. (3.66m) RS232 shielded PC programming cable for CLICK, DL05, DL06, DL105, DL205, D3-350, and D4-450 CPUs. 9-pin D-shell female connector to an RJ12 6P6C connector.

Note: If your PC has a USB port but does not have a serial port, you must use programming cable EA-MG-PGM-CBL.
